## 15.1 RFP DETAILS

---

### 1. BACKGROUND

GPAA is experiencing difficulty with completing full and incremental backups on a daily basis. Poor backup speeds and device errors are seen. This can lead to not being able to meet Recovery Time Objectives (RTO) or Recovery Point Objectives (RPO) or worse case, data loss. The issue is amplified by increasing data volumes requiring protection and shrinking windows available to backup those data volumes.

### 2. CURRENT CHALLENGES

- Certain backup types such as file system backups exceed prescribed backup windows, placing system, network and backup resources under strain.
- Device errors such as disk storage and robotic tape drives being downed are being experienced on a regular basis. Slow transfer rates are known for causing excessive wear and tear on tape drives.
- Insufficient media.
- Device errors could be a contributing factor leading to frozen tapes and insufficient media.
- Agent backups such as MS-SQL and VMware backups are not used. This may lead to inability to recover servers in a disaster situation..

### 3. ASPECTS TO BE COVERED

The scope is limited to services to be able to maintain, support and enhance existing NetBackup software applications in use within GPAA. The proposal should cover the following;

- Configuration of NetBackup appliance as a media server where all backups will be written in deduplicated format. NetBackup master server will continue to operate as master server from where all configuration, scheduling, monitoring and reporting is done
- NetBackup deduplication technology which offers segment level global deduplication across clients for maximum backup storage reduction
- NetBackup Accelerator facilitates intelligent, streamlined backups to the NetBackup appliances by increasing the speed of full backups.
- All client backups to run to the appliance deduplication disk pool.
- VMware policies configured to perform full vmdk backups with the ability to restore single files.
- VMware hosts be backed up to the appliance via SAN.

- The file system backups for the file servers be configured with NetBackup Accelerator with client (source) deduplication be configured to backup directly to the NetBackup appliances.
- The rest of environment will be backed up to the appliance with appropriate application or filesystem policy type. Where possible, client-side deduplication should be enabled.
- Separate disk for Exchange GRT backups will no longer be required as the Appliance will fulfil this role as
- Reduction in the overhead on the backup infrastructure Appliance media server through a combination of the changed data with the rest of the client's data that is stored in previous backups thereby creating a new full backup image without needing to transfer all the client data.

### **Intellectual property Issues**

Each party will be entitled to claim full ownership of their own intellectual creations for this specific RFP.

## **4. REQUIREMENTS**

Bidder should provide proposal in the template provided below (Annexure A). The essential parts of the information should cover the following profile::

- a. NetBackup appliance specification (see Annexure A, Table 1)
- b. Disaster Recovery (DR) Plan  
(Source data; 34 Hamilton Street. Destination data - replication site); MTN Gallo Manor Data Centre)
- c. Relocation of Tape Library to DR site.
- d. Archiving solution to move aged, unused and unreferenced file server and mail server data to secondary storage. (Archived data is stored in 'Single Instance' format on the Enterprise Vault Server on DAS, NAS or SAN)
- e. Duplicate the same scenario for 50 user network at GEPF.
- f. Detailed Project Plan.

**CERTIFICATE OF INDEPENDENT BID DETERMINATION**

- 1 This Standard Bidding Document (SBD) must form part of all bids<sup>1</sup> invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).<sup>2</sup> Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
  - a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution's supply chain management system and or committed fraud or any other improper conduct in relation to such system.
  - b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.
- 4 This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

<sup>1</sup> Includes price quotations, advertised competitive bids, limited bids and proposals.

<sup>2</sup> Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
